## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Yuyama et al. USPN 5,709,063.

(Re claim 1) "a tablet feeder in which tablets are delivered from a tablet storage case ..." (figure 2). "counted by counting means (col 5 lines 18-25). "case detection means ... from start ... counting means is kept in off state until a start state of mounting" (figure 5, "backup tablet feeders activated").

(Re claim 2) "identification means is kept in off state until a start state of mounting" (col 6, lines 23-37).

(Re claim 4) "separately detecting a state from a start ... to a middle ... and a state from the middle ... to an end" (figure 5, ie. The multiple steps of the interruption program).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yuyama et al. 5,709,063 in view of common knowledge.

Yuyama discloses the dispenser as claimed in claim 1.

Yuyama does not disclose that it waits for a noise influence time to pass.

It is common knowledge that waiting for a sensor or any other electronic device to reach a steady state condition before relying on it for information.

It would be obvious to one skilled in the art for the dispensing and counting means of Yuyama to wait till signals from detection means to reach a steady state condition.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. USPNs 6,012,602, 6,644,504, 6,349,848 and 5,852,911.
